

Brand Visual Source Brief v1

Purpose

Create one master visual source for the whole MariAma ecosystem before generating the website atmosphere.

This source should become the parent identity for:

- website background logic
- page hero atmospheres
- tonal zones across the site
- section visuals
- later headers / banners / platform visuals
- broader brand coherence across the ecosystem

The goal is not to create one image that will be reused literally everywhere.

The goal is to create one visual origin from which the rest of the system can be derived.

Core principle

The ecosystem should feel like one continuous atmospheric field.

Not five disconnected page aesthetics.

Not five unrelated palettes.

Not one generic website theme.

Instead:

one master visual field, segmented into five tonal zones.

These zones correspond to:

1. Music / Amivra Ark
2. Home
3. MariAma
4. Practice / Insight Timer
5. Books & Tools

The viewer should feel that all five belong to one world.

Structural idea

The master visual source should behave like a long horizontal atmospheric composition.

Think of it as:

- one panoramic field
- one environmental gradient
- one continuous visual landscape
- later divided into vertical page crops

It should feel as if each page is a cropped zone from one shared visual continuum.

It does not need to look like a literal landscape or photo panorama.
It can be abstract, atmospheric, tonal, material, and spatial.

Order of tonal zones

From left to right:

1. Music / Amivra Ark
darkest, deepest, most reflective, most architectural
2. Home
balanced, central, neutral-connecting
3. MariAma
warmer, softer, more human, editorial
4. Practice / Insight Timer
airier, gentler, more restorative
5. Books & Tools
clearest, calmest, most structured, most readable

This progression should feel natural and gradual.

Emotional progression

Depth → Orientation → Presence → Reset → Clarity

Material language

The image should suggest subtle materiality through atmosphere.

Allowed material cues:

- glass
- metal diffusion
- reflected light
- soft haze
- muted depth
- brushed quiet surfaces
- mist
- paper-stone calm
- subtle bloom

- soft shadow

Avoid making it look like:

- a metal wall
- a paper sheet
- a cloud stock image
- a cosmic wallpaper
- a cheap gradient mesh

Materiality should be implied, not literal.

Light logic

The master field should include:

- low reflective light
- soft diffusion
- controlled bloom
- subtle tonal transitions
- restrained glow

The light should feel:

- cinematic
- quiet
- restrained
- premium
- environmental

Avoid:

- strong neon
- fantasy glow
- sparkles
- mystical beams
- overexposed wellness brightness
- dramatic spotlight effects

Color direction

The field should transition through:

- dark cool neutrals
- softened metallic neutrals
- warmer editorial neutrals

- airy muted light neutrals
- pale structured neutrals

Zone tendencies

Music / Amivra Ark

- charcoal
- graphite
- deep steel blue
- muted black-brown
- low amber-gold glow

Home

- dark neutral grey
- muted silver-grey
- controlled warm-cool bridge
- balanced soft contrast

MariAma

- soft stone grey
- warm grey
- muted taupe
- pale ash-beige
- quiet warmth

Practice

- mist
- pearl grey
- pale warm grey
- cloudy light neutral
- gentle soft light

Books & Tools

- paper-stone
- soft ivory-grey
- pale warm neutral
- quiet editorial lightness

Avoid:

- bright saturated colors

- obvious rainbow gradients
- trendy purple wellness tones
- aggressive blue tech UI
- gold luxury cliché
- pastel sweetness

Image character

The master source should feel:

- abstract but usable
- atmospheric but not vague
- modern but not trendy
- premium but not luxury cliché
- calm but not empty
- artistic but not self-indulgent
- structured but not rigid

It should support text and layout later.

Composition rules

The image should have:

- horizontal continuity
- smooth zone transitions
- enough tonal depth for cropping
- quieter areas where text can later sit
- no single dominant object
- no literal scene that locks meaning too narrowly

The image should not have:

- faces
- people
- bodies
- buildings as clear architecture
- typography inside it
- obvious symbolic objects
- stars / moons / galaxies cliché
- flowers / nature cliché
- meditation cliché visuals
- obvious office/productivity cliché visuals

Spatial behavior

The field should suggest depth and movement without becoming busy.

Think:

- shallow environmental depth
- quiet transitions
- layered tonal space
- soft receding planes
- subtle drift from dense to airy

Functional requirement for website use

The master visual source must work as:

- a parent field for five page backgrounds
- a crop source for hero areas
- a tonal identity base for section backgrounds
- a reference for later visual prompts

That means it must contain:

- variety across the width
- continuity across the whole
- no section that visually breaks the system

Cropping logic

From the master field, derive five crops:

Crop 1 — Music

Take the darkest, deepest, most reflective segment.

Crop 2 — Home

Take the balanced central segment.

Crop 3 — MariAma

Take the warmer transitional segment.

Crop 4 — Practice

Take the softer, airier, more restful segment.

Crop 5 — Books & Tools

Take the cleanest, calmest, most readable segment.

Each crop should feel distinct, but clearly related to the others.

Cross-platform use logic

This source may later influence:

- website backgrounds
- Spotify banner logic
- YouTube channel art direction
- section dividers
- promo visuals
- social headers
- future ecosystem visuals

But it should influence them through:

- tone
- light behavior
- material feeling
- atmospheric family

Not by literal copy-pasting everywhere.

What this source is not

It is not:

- a finished website design
- a final album cover
- a poster
- a literal panorama photo
- a decorative wallpaper
- a moodboard collage

It is:

- a controlled atmospheric origin
- a visual DNA field
- a parent source for the ecosystem

Working title

Brand Visual Source v1

Final working statement

The visual identity of the ecosystem should begin from one continuous atmospheric source, divided into five tonal zones, and later expressed across pages, platforms, and visual adaptations without losing coherence.
