

Site Build Handoff Master Brief

Project goal

Build a new static website for the MariAma ecosystem.

This is not a standard business website and not a single-product landing page.
It is a multi-branch author ecosystem that brings together:

- sound
- language
- practice
- reflective tools
- books
- ambient music environments

The goal is to create a calm, coherent, modern website that feels like one connected system rather than a collection of unrelated pages.

Core ecosystem structure

1. MariAma
The authorial umbrella / system level.
2. Amivra Ark
The sonic branch / ambient music project.
3. Practice / Insight Timer
Guided, voice-led, and long-form listening support.
4. Books & Tools
Written formats and reflective tools.

Core messaging principle

The ecosystem creates quiet tools and reflective environments for everyday life.

It is designed to support:

- calmer attention
- inner balance
- gentler shifts of state
- clarity
- rest
- reflection
- softer pacing

Important:

This project should not sound like:

- generic startup copy
- generic wellness copy
- therapy claims
- “fix your life” language
- vague art-speak with no practical meaning

It should stay:

- calm
- clear
- human
- state-aware
- modern
- restrained

Approved website structure

Build these main pages:

1. Home
2. Music / Amivra Ark
3. MariAma
4. Practice / Insight Timer
5. Books & Tools

Optional later:

6. Archive / Projects

Core page purposes

Home

A central routing page for the whole ecosystem.

It should help the visitor understand:

- what this is
- how it is structured
- where to go next

Music / Amivra Ark

The sonic branch.

Focused on architectural listening, ambient releases, and the current album.

This page should not be only a list of outbound links.
For version 1, it should include a light internal music presence:

- current release focus
- album cover
- short release text
- platform buttons
- architectural listening explanation
- album world framing
- optional simple embedded YouTube element if feasible

Identity mark rule

The current owl logo / Amivra Ark mark should be preserved in version 1.
It is an active continuity element across the project and should not be removed or replaced at this stage.
It may be integrated more cleanly into the rebuilt system, and refined later if needed.

Important:

Do not overbuild this into a full player system, storefront, or advanced onsite listening platform in version 1.

MariAma

The authorial umbrella.

Not a standard bio page, but the human and conceptual center of the ecosystem.

Practice / Insight Timer

The guided and listening-based support layer.

Must include both:

- voice-led / reflective formats
- long-form rest / sleep / listening environments

Books & Tools

The written and structured branch.

Clarity and readability matter most here.

Text source rule

Use approved text from:

Master Messaging Sheet

Do not invent new brand language.

Do not replace the tone with generic startup, wellness, or self-help language.

Keep all text editable.

If layout requires shortening, preserve full original text separately.

Visual system rule

The site must be built from one continuous visual source, not from five separate aesthetics.

Use this principle:

one visual source, five tonal zones

Page order across the tonal system:

1. Music / Amivra Ark
2. Home
3. MariAma
4. Practice / Insight Timer
5. Books & Tools

Conceptual progression:

Depth → Orientation → Presence → Reset → Clarity

Shared interface, different atmospheres.

Brand Visual Source rule

All page atmospheres should be derived from one master visual field.

That field should feel like:

- one continuous atmospheric source
- one connected visual world
- later divided into five tonal crops for the five pages

Do not invent unrelated gradients or separate page aesthetics.

Tonal zone logic

Music / Amivra Ark

Darkest, deepest, most reflective, most architectural.

Home

Balanced, central, connective.

MariAma

Warmer, calmer, more human, editorial.

Practice / Insight Timer

Airier, softer, more restorative.

Books & Tools

Cleanest, calmest, most readable, most structured.

Shared UI rule

These should remain consistent across all pages:

- header
- footer
- navigation logic
- button system
- spacing system
- grid system
- typography hierarchy
- card family
- section rhythm

Page differences should come from:

- background crop
- tonal density
- light level
- warmth/coolness balance
- imagery direction
- material feeling

Visual mood

The website should feel:

- calm
- modern
- editorial
- architectural
- spacious
- premium
- restrained
- coherent

It should not feel:

- like an old atmospheric HTML site
- like a generic startup landing page

- mystical or cliché spiritual
- overly corporate
- visually noisy
- collage-like
- overdesigned

Material and light logic

Use subtle materiality:

- quiet reflective surfaces
- softened diffusion
- haze
- muted depth
- controlled bloom
- smooth tonal transitions
- paper-stone calm
- soft metallic suggestion

Avoid:

- literal textures
- decorative overlays
- flashy metallic gimmicks
- obvious stock-image realism
- neon
- dramatic spotlighting
- mystical beams
- glitter

Palette direction

Use one muted tonal family across the site.

General palette character:

- muted
- calm
- editorial
- premium
- restrained

Base neutral family:

- charcoal
- graphite

- deep neutral grey
- steel grey
- soft silver-grey
- warm stone grey
- muted taupe-grey
- pearl grey
- pale warm grey
- paper-stone light neutral

Accent behavior:

Use tonal and light shifts rather than bright accent colors.

Examples:

- low amber glow
- softened metallic warmth
- cooler steel diffusion
- pale warm lift
- faint editorial warmth

Typography direction

Use one main sans-serif family across the website.

Preferred mood:

- calm
- modern
- editorial
- readable
- intelligent
- restrained

Avoid:

- corporate SaaS feel
- futuristic tech fonts
- decorative pairings
- handwritten spiritual styles
- too many font families

Preferred practical direction:

Use a web-safe, accessible, free font family such as Montserrat as the main system font, unless a better free equivalent is chosen for readability and consistency.

Variation should come from:

- weight
- scale
- spacing
- rhythm
- placement

Not from many unrelated fonts.

Readability rule

No atmosphere should overpower the text.

Rules:

- do not place long text over active imagery
- maintain strong readability
- create quieter zones behind important copy
- let atmosphere support content, not compete with it

Destination links logic

The website should function as a structured ecosystem hub.

Primary external destinations for version 1:

- Spotify
- Apple Music
- YouTube
- YouTube Music
- Insight Timer
- Amazon

Social links such as Instagram and TikTok are secondary.

They may appear in the footer or remain omitted in version 1 if needed for clarity.

They are not the main routing logic of the website.

Contact logic for version 1

Do not add:

- public email
- contact form
- contact-focused section

At this stage, the site should not function as a contact-driven business site.

It should function as a structured ecosystem hub.

Required sections by page

Home

- Header
- Hero
- Choose your path
- Featured now
- What this ecosystem is
- The branches
- For moments like these
- Selected destinations
- Footer

Music / Amivra Ark

- Header
- Hero
- Intro
- Current release
- What is Architectural Listening
- For moments like these
- Album worlds
- Listening destinations
- Footer

MariAma

- Header
- Hero
- Intro
- What this system creates
- The ecosystem
- For moments like these
- A grounded practice
- Footer

Practice / Insight Timer

- Header
- Hero
- Intro
- What you'll find
- On Insight Timer
- For moments like these
- How this branch works

- Featured rest formats
- Footer

Books & Tools

- Header
- Hero
- Intro
- What you'll find
- Featured titles
- What these formats are for
- For moments like these
- Where to find them
- Footer

Build priorities for version 1

Please focus on:

1. structure
2. layout
3. hierarchy
4. consistency
5. page-to-page coherence
6. correct text placement
7. shared components
8. tonal system logic
9. light internal music presence on the Music page

Do not focus first on:

- animations
- complex effects
- decorative visuals
- over-styled sections
- invented new copy
- speculative features
- advanced player logic
- store logic
- payments
- contact workflows
- complex platform integrations

Required output

Please return:

- A. A proposed page-by-page build plan
- B. A suggested section structure for each page
- C. A recommendation for how to organize the layout system
- D. A recommendation for how to apply the one visual source / five tonal zones logic
- E. A list of shared components that should be created first
- F. Any minimum missing input needed from me

Important constraints

- Think like a system designer, not only a copywriter
- Keep the ecosystem elegant, restrained, calm, and readable
- Do not invent extra branches
- Do not simplify the project into generic wellness branding
- Do not turn it into a startup-style SaaS site
- Do not create five unrelated moods
- Build a static site framework that can later be refined visually

Final instruction

Build the first version as a coherent static site framework for a multi-branch author ecosystem, using one approved messaging system and one continuous visual source divided into five tonal zones.
